

# Carabineros – Virtual Police Station Infrastructure Migration

The Carabineros de Chile is the institution responsible for giving effect to the law, its purpose being to guarantee and maintain public order and internal public security throughout the territory of Chile's Republic, and to carry out the other functions entrusted to it by the Constitution and the law.

## THE CHALLENGE

The client has a solution for citizens called the Virtual Police Station. It is hosted and under the operational responsibility of the Undersecretary for Crime Prevention (SDP) and the Digital Government Division (DGD). Carabineros needs to take control and governance of information in a solution where it is 100% responsible and from there create digital solutions.

## THE SOLUTION

A migration of 5 accounts with all the information contained was carried out to a multi-account solution, under AWS standard called Well Architected Framework.

## THE RESULTS

- Unification of SDP and DGD accounts
- Complete migration of AWS information and services
- Creation of Control Tower for the control and management of accounts
- SIMPLE solution migration
- Autonomy of the operation of the Virtual Police Station
- Information Governance
- Operational Independence
- Independence in Development of other digital functions
